

The **Bixy Pixy MINI** size brush is easy to clean with fingers, thanks to its smaller head. However, it can be a little more difficult with the **Large brush**. The head of the large brush is wider and the fur in the middle is more difficult to remove. But, with a few extra tools, it's easy !

Just follow these **3 quick and easy steps** that will help you efficiently clean your brush of dirt and fur:

1) Choose tools with thin and long end -

We recommend to use the end of a rat tail comb, but you can use other tools, like toothpick, pencil, scissors, etc.

2) Place it at the bottom of the hairbrush bristles and work it in until you can pull the hair up and out. Turn the brush and repeat until all the hair is removed.

3) Now you can remove the whole fur with your fingers. You can also rinse the brush under running water with a pet-safe shampoo. Store in the clean and dry place.
